

MAKSIM CHUKHROV

AI / Python Engineer — LLM agents and process automation

Location: Yerevan, Armenia

Contact: +374 43 807 662 · maksimchuhrov@gmail.com · Telegram @Elchar581 · github.com/Elchar581

Salary: from \$1,400 net

Work format: office or hybrid in Yerevan · remote also considered

Work permit: Russian citizen; residence permit in progress

Languages: Russian — native · English — A2

EXPERIENCE

AI Engineer · own projects, alongside main role Feb 2026 — present

- Cut preparation of large analytical reports from 30 hours per week to 50 minutes with a three-agent LLM pipeline that runs without human input, packaged as a reusable agent skill instead of one-off prompts.
- Reduced logistics and goods-turnover data processing from 8 hours to 10 minutes by writing custom agent skills and a shared orchestrator.

Python Developer, Team Lead · university startup (Tsiolkovsky KSU), Kaluga Jun 2025 — present

- Shipped a Telegram Web App from zero to production in 4 months, serving 50+ monthly users, on Django, PostgreSQL and React.
- Built a data-processing library for test data from scratch — no tool for this format existed in the project.
- Met a client-set deadline with a team of 4: ran task grooming and took requirements directly from the project owner.

Backend Developer (Go) · Digital Documents LLC, Kaluga, part-time Sep 2025 — Mar 2026 · 7 mo

- Standardised database access across 300+ methods — the entire backend including Kernel — by migrating it to pgx v5.
- Cut incident triage time: moved error handling across all services to the corporate library, making the root cause visible in logs immediately.
- Ran and delivered the service in Docker containers.

Applied Solutions Developer · Advanta Consulting LLC, contractor Jul 2024 — Jan 2025 · 7 mo

- Eliminated manual transfer of project plans into ADVANTA for Aeroflot PJSC by delivering the "Table Plan Editor" software built on Excel and VBA.
- Removed the human factor from daily ADVANTA reporting: a Python parser exports reports and dashboards on schedule instead of manual assembly.

Reference: Yulia Polishchuk, Head of Implementation Projects.

Development Intern · Rosatom State Corporation Apr 2025 · 1 mo

- Delivered 2 VBA tools in one month for the "Risk Analytics" internal project of the investment department.

Developer (VBA) · private contract Oct — Dec 2023 · 3 mo

- Replaced manual vacation-schedule checks in HR: the planner finds overlaps itself and flags leave starting within the next 20 days.
- Automated the notification document for every employee — previously written by hand.

Backend Developer (Python) · SUNRISE, Discord community Jan — Jun 2023 · 6 mo

- Automated moderation of a 200-member server, replacing 50+ manual moderator actions per day with a Python bot.

ACHIEVEMENTS

- 1st place, Kaluga Autumn Hackathon 2025 — "Eco Patrol", a Telegram Web App. Team lead, 5 people.
- 1st place, Kaluga Autumn Hackathon 2024 — Android app (Java) for mobile network quality monitoring. Team lead.

— Team lead at Kaluga Autumn Hackathon 2023 and 2022 — network monitoring app and a city-events parser in Python.

SKILLS

AI: LLM agents · custom agent skills · multi-agent orchestration · prompt engineering · n8n
Backend: Python · Django · PostgreSQL · SQL · REST API · Docker · CI/CD (GitHub Actions)
Also: Go · pgx · React · Java · VBA · Git / GitHub · Linux
Basic exposure: unit testing in Go (Ginkgo)

EDUCATION

Tsiolkovsky Kaluga State University · Information Systems and Technologies
Master's, 2026 — present (part-time) · Bachelor's, 2026
Yandex Lyceum · Industrial Programming Fundamentals 2020
